## AGRICULTURAL AND MECHANICAL COLLEGE OF TEXAS.

---

*Hon. T. M. Campbell, Governor, Austin, Texas.*

SIR: A clear and comprehensive statement of the needs of the Agricultural and Mechanical College appears in this report as given by the Board of Directors. Each item called for is imperative if the school is to make progress in keeping with the educational demands of the hour. It is not the wisest policy to give in dribs what is required for substantial improvements now. It seems to me that it would be more economical in the end to put each department on a sound and substantial basis, thus relieving the College of its present cramped condition, and, at the same time, equipping it for the largest degree of usefulness. The high character of work being done with inadequate equipment certainly justifies the claim that with ample funds the school would not have a superior for industrial training in the world. We have as fine material in the way of young men seeking this kind of training as the country affords. The young men who are being educated at the A. & M. College are inspired by the inexhaustible resources of the State and the demand for their development; and by the reward which awaits the man who can apply science to agriculture, and practical knowledge to the mechanical arts. The inestimable value to the State of a thoroughly trained corps of young men leaving this school annually and engaging in the practical pursuits essential to the greatest progress along agricultural and mechanical lines cannot fail to appeal with irresistible force to those charged with directing public affairs. There is no just reason why Texas should not have a school of industrial training equal to, if not superior, to any other State in the Union.

Texas cannot afford to deny her young men who are seeking an industrial education any reasonable opportunity of securing it, or to be dilatory in supplying them with adequate facilities for prosecuting their studies. The extraordinary growth of this College during the last few years has awakened a public interest in its general welfare, which has resulted in more liberal appropriations and better equipment, but the financial demands of the Institution will always have to be governed by its growth and expansion. An increase in the number of students must necessarily call for larger sums of money to be used in building additional room, in providing equipment, and in securing additional teaching force.

The kind of scientific knowledge and training which is essential to the industrial progress of our State can be obtained only in the best equipped technical schools; and if our home schools fail to furnish first rate opportunities for this training, our sons will have to depend upon the generosity of other states whose institutions are not hampered for the lack of means.

It should be the ardent desire of every patriotic Texan to see the

A. & M. College of Texas at least the equal of any technological school in America. Respectfully,

R. T. MILNER.

COLLEGE STATION, TEXAS, November 30, 1908.

Hon. T. M. Campbell, Governor, Austin, Texas.

SIR: We herewith present the biennial report of the Agricultural and Mechanical College of Texas for the fiscal years 1907-1908, and an estimate of the needs of the Institution for the next two fiscal years.

The Agricultural and Mechanical College offers the young men of Texas an opportunity of qualifying themselves to do expert work in all lines of agriculture and in the several departments of engineering.

Four-year courses are offered in Agriculture, Animal Husbandry, Horticulture, and in Architectural, Chemical, Civil, Electrical, Mechanical and Textile Engineering. A two-year practical course in agriculture is offered for the benefit of young men who wish to acquaint themselves with the more important scientific methods of farming, but who are not prepared to enter the regular four-year course, or who have not the means or the time to take such an extensive course.

Instruction is also given in English, history, economics, mathematics, modern languages, physics, chemistry, and in other studies which lie at the foundation of a sound education and furnish the best preparation for the more technical studies of the several courses.

A thorough course in military science also is given. The students of the College are organized into a regiment of two battalions, under the immediate command of the commandant. The military feature is an important adjunct to the work of the College. Military training is conducive to health and to bodily grace and strength, and cultivates habits of attention, obedience, punctuality, neatness and regularity.

Its work, however, is not confined to giving instruction to the more than six hundred cadets who spend nine months of the year on its campus, attending classes. By means of bulletins, the press, lectures delivered by different members of the Faculty at Farmers' Institutes, and by personal letters, it furnishes information of a scientific and practical character to thousands of men who are actively engaged in the various industrial activities of the State. Bulletins are sent free to each of the thirty-five thousand names on the regular mailing list of the Experiment Station and to others on application.

*More Buildings Needed.*—There is urgent need of more dormitories. The total number of rooms now available for students is 240. These rooms can comfortably accommodate only two students each; but in each of thirty-eight of them there are at present three students. The total number of tents is thirty-six, and two cadets are quartered in each tent. This is the only institution in the civilized world where a number of its students are forced to live in tents during

the entire school year. Our remote ancestors lived in caves and subsisted on the spontaneous products of the earth, and were not at all aesthetic in their tastes concerning dress, but all proprieties of modern civilization demand that our educational institutions, at least, shall not encourage such primitive methods of living. It is not a question as to whether the boys enjoy the same degree of health in these tents as they would in dormitories; but it is a reflection upon the people who boast of a State so vast in its area, so rich in its natural resources, so unsurpassed in the fertility of its soil, and so renowned in its history, that nearly one hundred of our boys have to live in tents in order to avail themselves of the advantages offered at the only institution that Texas has established for the purpose of training men for industrial leadership. Surely this is not to be the permanent policy of the State with reference to the accommodations that are to be provided for those of her sons who look to the Agricultural and Mechanical College for an education. But aside from other considerations, dwelling in tents is not wise from an economical standpoint. These tents cost about sixty dollars apiece and are expensive to keep in good repair. In order to relieve this condition and provide ample room for students, we recommend an appropriation of \$80,000 for dormitories, to be used during the next two years.

There have been matriculated to date, the largest number of students in the history of the institution, and it is confidently believed that with adequate dormitory facilities we would have a thousand students in the next two years.

*Trolley Line.*—It might be wise for the Legislature to consider the propriety of constructing a trolley line from Bryan to College, if such can be done within constitutional limitations, to the end that the attendance might be increased without additional dormitories in the future.

*Mechanical Engineering Building.*—With the new Engineering Building, the overcrowded condition will be entirely relieved in the Civil, Electrical and Architectural Engineering and Drawing Department; but this does not in any way relieve the Mechanical Department, which gives instruction to the Freshmen, the Sophomores, and many of the upper classmen of all courses.

As shown in the report of the Head of the Mechanical Department, the carpenter and blacksmith shops are over-crowded, both as to number of students reporting for instruction, and as to the number of hours of running the shops; and still it is impossible to give each student the required number of hours of practice.

Absolutely no facilities are provided for instruction in foundry work, which is one of the most important subjects for all engineering students. More equipment would not suffice in this case, as there is no suitable place in the present building for such work.

The Mechanical Engineering Experimental Laboratory is absolutely unfitted to take part in Engineering Experiment Station work soon to be established by the General Government at Washington, and in the meantime the graduating students have practice of this kind with a very insufficient number of machines.

Not only the size but the condition of certain portions of the

building renders the present blacksmith shop and experimental laboratory totally unfit for the required work. These parts of the building are very old and have been used at various times as boiler rooms, laundry, etc., and their walls are actually crumbling away so that the bricks may be removed by hand.

In the light of these facts it is recommended and urged that an appropriation of \$50,000 be made to provide a suitable building for the accommodation of the shops, laboratory, section rooms, and offices of the Mechanical Department; and that a further sum of \$25,000 be appropriated for furniture and equipment.

That this sum is exceedingly modest is shown by a comparison with the amounts appropriated for similar purposes in other schools, in whose class the Technological School of Texas should be placed. Purdue, Ohio State, Pennsylvania State, Illinois, Iowa, Case, Michigan Agricultural College, and numerous others have similar buildings and equipments, valued at from two to ten times the amount here asked for.

*Maintenance.*—The attendance of the College has increased fifty-one per cent in the last two years, and new courses have been added. The course of Architectural Engineering, established a few years ago, now has students in all four classes and the Head of this Department has been appointed College Architect, which necessitates additional help for this department. A course in Chemical Engineering has been added; and also a two-year course in practical agriculture. Arrangements have been completed for a six weeks summer session, beginning with the summer of 1909. The summer session will include a summer normal for teachers; courses in agriculture for farmers; sub-freshman courses in English, history, and mathematics for the benefits of young men who desire to enter College, but are not prepared to meet our entrance requirements; courses in regular freshman work for those who are not fully prepared to enter the Sophomore class; and courses adapted to the needs of students who have deficiencies.

Notwithstanding all this additional work and the large increase in the number of students, there has not been a corresponding increase in the appropriation for maintenance. The College has now reached the point when additional teaching force has become absolutely necessary to its further progress.

*Central Heating Plant.*—One of the greatest needs of the College is a central heating plant. At present the living rooms, section rooms, and offices are heated with stoves. Aside from the inconvenience, expensiveness and danger of the present system, the wood supply adjacent to the College is becoming so scarce that it will soon be necessary to use coal instead of wood. This will necessitate the expense of buying a large number of coal stoves unless provision is made for a steam heating system.

The following estimate is based on a low pressure steam heating system in the buildings named below, the cost being estimated at eighty cents a square foot of radiation, and the connecting pipe lines being estimated at two dollars a lineal foot.

Main Building.....	\$3,500 00
Agricultural Building.....	2,000 00
Chemical Building.....	3,000 00
Hospital .....	1,300 00
Gathright Hall.....	2,000 00
Austin Hall.....	1,000 00
Pfeuffer Hall.....	1,000 00
Ross Hall.....	1,500 00
Pipe lines to and from these buildings.....	5,000 00
Additional Boiler Capacity.....	4,000 00

Total .....\$25,300 00

This estimate does not include Goodwin Hall, the Engineering Building, or the Experiment Station Building, because they will be provided with heating systems out of the special appropriations already made for those buildings; it does not include the Assembly Hall, because the expense would hardly be justified. It does not include the Mess Hall because it would probably be cheaper to have a separate plant in the Mess Hall since it is so far from the boiler house.

*New Cottages.*—Several new cottages will be required to meet the necessities of College officials. In several cottages now on the campus, single men have rooms in the houses occupied by families, and in some instances two families occupy the same cottage. There are absolutely no residences here for the accommodation of families except those that are owned by the State.

*Roads.*—An appropriation of \$12,500 is needed for the construction of about two miles of improved road on the College campus. We now have about one mile of gravel roads on the grounds built by the funds appropriated by the Twenty-eighth Legislature, and these roads have given good service. They were put down without the use of a road roller, however, and required some months for their proper consolidation. Of the amount above suggested about \$2500 should be expended in purchasing a steam road roller, which would be useful not only in the construction of new roads but in the consolidation of old ones. As the roller would also be useful for instruction purposes with the classes in road building, it would be a permanent asset.

The roads and grounds of the College should be object lessons to students and all visitors to the Institution, but it is impossible to make them so without a reasonable expenditure of money.

*Student Labor.*—Many boys are turned away from College each year because they have not money enough to defray their necessary expenses. The young men who are "willing to do anything for an education," usually make the best students, and the State should lend these young men a helping hand. The number of young men seeking the benefits of this fund has increased so rapidly during the last three or four years that it will be necessary to increase the fund in order to meet the demands even of the most worthy applicants. A committee of the Faculty is charged with the duty of supervising the expenditure of this fund, and there can be no question as to its being conservatively and judiciously used.

*Care of Roads and Grounds.*—An increase of \$1000 a year for the care of roads and grounds is greatly needed. The present appropriation, \$1000, has proved to be entirely too small to keep the young trees and shrubbery of so large a campus in proper condition. The campus ought to be an object lesson both to students and visitors, but it is not possible to keep it in a respectable condition on the amount heretofore appropriated for this purpose.

*Library.*—No department of the College is in greater need than the library. The last two Legislatures failed to make any appropriation whatever for this purpose. A great many of the books are so badly worn as to be unfit for use; the replacing of these and the adding of new ones would be helpful to all the departments of the College work.

*Fire Protection.*—There is absolute need of better fire equipment in the way of hose carts, hose, ladders, and fire escapes for the dormitories. The necessity for this equipment was clearly demonstrated during the recent fire in the Agricultural Building, when the hose was constantly breaking. The heroic work of the cadets on this building proves very conclusively that with suitable equipment they could save any of the College buildings from destruction by fire.

*Steam Plant.*—Under this head are included the light plant, the ice factory, the laundry, and waterworks. The plant also furnishes power for the shops and other engineering buildings and the heating of the textile engineering building. The amount of water and lights now used is more than double that of two years ago, and the work of the laundry has increased two and one-half times during the present year. The increase in the number of students necessitates additional room for the laundry, and the present boilers are now crowded far beyond the point where the best results can be had from the fuel.

*Department of Architectural Engineering and Drawing.*—To keep pace with the development of the State and the growing demand for technical education, the facilities at this College for instructing, lodging, and boarding students must be improved and increased from year to year. To secure the best results in this work, the College should have the continuous service of an architect. We have, therefore, established the office of College Architect, and have appointed Professor F. E. Giesecke, Professor of Architectural Engineering and Drawing, to that position, making it his duty to furnish plans and specifications for buildings to be erected at the College, and to supervise their construction in addition to performing his regular duties as a member of the teaching staff. Such additional help as may be necessary from time to time to carry on this work successfully is to be supplied and the expense incurred thereby charged to the buildings affected.

Professor Giesecke assumed his new duties June 1st, and since that time has been in charge of the architectural work for the dormitory for the Prairie View College, the cottages, sheds, and the Engineering Building for the A. & M. College, and the Administration Building for the Experiment Station; the cost of this work would ordinarily exceed \$5000; at least half of this amount will be saved to the State through the office of the College Architect.

To enable this department to give good instruction in Architectural Engineering and to perform the architectural work assigned to it, it is necessary to add continuously to our library, and to our collection of instruments, models and appliances, illustrating building construction; and we request an appropriation of \$2000 for the two years; one thousand for additional equipment and one thousand to defray running expenses.

*Entomological Department.*—The Entomological Department of the College and Experiment Station is absolutely in need of better facilities, such as an insectary, cold storage house, laboratories and collection rooms. An insectary in which an even temperature can be maintained, and the food plants may be kept alive all winter, is imperatively needed. Facilities for studying insects the year round are absolutely necessary, especially is this true of the plant lice, scale insects, and the green bug.

The green bug destroys five times as much grain in one of its invasions as it would take to equip and run this Department for the next twenty-five years. The boll weevil is calling for most careful study. The scale insects of the State are demanding attention and increased facilities are needed for this work. The citrus fruit growers of the State are calling for help. The truck gardeners are meeting their troubles and asking aid. The foul brood of bees is abundant in this State, and is causing widespread and serious loss to the bee keepers. All of these pests should be given careful and serious attention during the next two years.

*Department of Agriculture.*—This department gives instruction in farm crops, soils, farm management, irrigation and dairy husbandry. In order to carry on the work successfully additional equipment is needed in the creamery and in the agricultural machinery laboratory. The new agricultural implement building which was completed last summer has been partially equipped with some of the more modern types of machines, but in a State of such varied agricultural resources as Texas there is a necessity of great diversification of crops, and students of agriculture should be made familiar with the most modern and desirable types of farm machinery. Instruction in the laboratory, practice work, and in the field requires the use of large quantities of expensive material, but the value of the work can not be questioned.

*Animal Husbandry Department.*—Texas is the greatest live stock State in the Union, and those engaged in this industry have a right to expect valuable aid from the Animal Husbandry Department of the A. & M. College. It should graduate men who are capable of acting as expert judges in the show ring, and to meet the many difficulties with which stock raisers and breeders have to contend. This Department should be superior to that of any College or University in the United States. To make it so, the highest types of the principal breeds of cattle, sheep, goats, swine, and horses should be kept. This is absolutely necessary in order to combine the practical with the theoretical as it should be done. The department has a variety of breeds of cattle, hogs, sheep, and horses, but it greatly needs additional breeds, such as Red Polled cattle, Duroc Jersey and Tamworth hogs, Merino sheep, Angora goats, draft and

coach breeds of horses, and a jack. It is impossible to give proper instruction in animal husbandry without representatives of the leading breeds of live stock.

Since the establishment of this department it has had no conveniences for the housing of its live stock and storing of feed. It has had to use for these purposes old sheds which are in such dilapidated state that more expense is required to keep them in repair than they are worth. An appropriation of \$2500 for a suitable building would make the work less expensive and far more satisfactory.

It is the purpose of this department to maintain its live stock from the money received from the sale of the increase. For the first two years, however, there will be nothing for sale except pigs and sheep, and during this time the major portion of the expense of feeding the the stock will have to come from some other source. The purpose for which this live stock is used makes it imperative that the animals be kept in first class condition. The native grass alone will do this only for a brief period of the year. It will, therefore, be necessary to have an appropriation for the next two years to cover the expense of feeding this stock.

*Electrical Engineering Department.*—So great is the demand for electrical engineers that this department, though organized only five years ago, now has an enrollment of more than two hundred students.

The department will occupy its new quarters at the beginning of the next session, and when this change is made laboratories will have to be wired, fitted, equipped, and other furnishings will be necessary. The amount asked for is as small as the absolute necessities of the case will justify. It will be impossible to compete with similar departments in other institutions if we are without the necessary equipment to give our students the kind of training that they should by all means have.

The demand for electrical engineers in Texas is already greater than the supply, and there is every reason to believe that this demand will increase very rapidly during the next few years. The State will either have to make the necessary appropriations for the training of the young men that will be needed or it will have to depend upon institutions of other states for its supply of properly equipped men.

*Veterinary Department.*—This department will need \$750 a year for the next two years for maintenance and \$1000 a year for equipment. Aside from minor things the equipment needed is as follows:

Books and Periodicals.

Surgical Instruments.

Operating table.

Rectangular Museum Jars (large).

Museum cases and labels.

Large containers for wet preparations.

Anatomical Models of the Brain, Eye and Ear.

Papier Machie or Wax Models of ticks, lice, tape worms, round worms, mites, flukes, etc.

Laboratory Apparatus.

Office Furniture.

*Department of Botany and Mycology.*—The increase in the maintenance and support of this department, and the appropriation asked for equipment, is designed to meet the necessary outlay in purchasing apparatus for advanced work in plant physiology and in soil bacteriology. The department is rendering a great service to the farmers, truckers and horticulturists of the State by aiding them to combat the hords of fungus pests and in testing all kinds of agricultural seeds. It is not uncommon for unscrupulous seeds dealers to purchase the foulest kind of seeds abroad at prices so low as to undersell legitimate competitors, and sell them to the farmers.

*Civil Engineering Department.*—The appropriation requested for the Civil Engineering Department will be utilized for the purchase of additional equipment for the cement testing laboratory, the hydraulic laboratory, the general testing laboratory, and also for such additional driving machinery as may be necessary in connecting therewith. Additional apparatus and scale models of portions of bridges and roofs will be added for the structural engineering designing room. Also additions will be made in the way of surveying and engineering instruments for field use, and for dust proof cases in which to keep these instruments when not in use.

*Department of Chemistry.*—A course in Chemical Engineering has been established to train young men as expert analysts. The large industries like the sugar refineries, cotton seed oil, cement works, iron works and other such industries require the service of expert analysts.

Besides the above named course this department teaches general chemistry, agricultural chemistry, and industrial chemistry.

*Department of Horticulture.*—The aim of this department is to give instruction along theoretical and practical lines and to meet the demands made upon it for teachers and superintendents of vegetable and fruit farms.

The theoretical work, which is got in the class room from lectures and text books, incurs comparatively small expense. The practical side, however, which is the more important of the two for this State, requires more or less of an annual expense. It has been very hard work for the department, on account of lack of funds, to keep the practical side of the course of study up to the proper standard. In order to secure the best results and to meet the demands of the times, the department should be able to develop fully the practical side of the student by giving him thorough instruction in the latest and best methods of vegetable and fruit growing, plant propagation, and also instruction with the different kinds of spraying machinery. Not only should this be done, but the Horticultural grounds and equipment should be kept in such condition as to be a constant source of inspiration to the young men.

*Farmers' Institutes.*—No appropriation is asked for the extension of this work. During the past year, the College assisted in Farmers' Institute work in conjunction with the Commissioner of Agriculture, by sending specialists to a large number of meetings of farmers; in each case the traveling expenses were paid by the Department of Agriculture. The College will continue to co-operate in

every way it can with the Commissioner of Agriculture and with all farmers' organizations, and will gladly furnish men from its various departments to visit agricultural meetings for the purpose of delivering addresses, organizing institutes, and performing such other work as will advance the interest of the farmers throughout the State.

*Needs of the College.*—At the close of this report we present a statement of the most urgent needs of the Institution. Unless these amounts are appropriated it will be hard for the College to maintain its present usefulness and impossible for it to meet the increased demands that are being made upon it. In the matter of equipment and in teaching force technical education is far more expensive than any other kind of College or University training. For instruction in Literature and the Liberal Arts, as well as in the ordinary professions, a teacher and a library are the chief items of expense. But in Technological and Industrial education adequate apparatus is absolutely essential to satisfactory results. Applied science is developing so rapidly that laboratories which are not frequently supplied with additional equipment soon become antiquated.

Texas could not make a more profitable investment than to provide the necessary facilities for preparing men for the work of converting her measureless natural resources into commercial products. The part that the College has already taken in this great undertaking has far more than justified its existence. It has lent powerful aid to more than one of the State's important industries. The Veterinary Department, for instance, in its work on the Texas Cattle Fever has saved more money to the stockmen of the State in one year than the grand total of all the appropriations that have been made to the College. This has been achieved by only one department and there are others that are doing work equally as important.

The amounts asked for are a conservative estimate of the needs of the Institution for the next two years.

Respectfully submitted,

K. K. LEGETT.

*President of the Board of Directors.*

ESTIMATES OF APPROPRIATIONS FOR THE AGRICULTURAL  
 AND MECHANICAL COLLEGE OF TEXAS, FOR THE  
 YEARS ENDING AUGUST 31, 1910 AND 1911.

	1st Year.	2d Year.

## CO-OPERATIVE WORKS OF UNITED STATES DEPARTMENT OF AGRICULTURE.

The United States Department of Agriculture is spending a large sum of money in the State for the betterment of our agricultural conditions. The Experiment Station is co-operating with the Department in the work at Chillicothe, under Mr. Connor, a graduate of this Institution; and with Mr. R. L. Bennett, at Paris. The Director of the Station would like to co-operate more closely with the Department at Washington in its other work carried on in the State in order that there may be no duplication of work, and derive at the same time the benefit accruing from mutual help.

---

### PRESIDENT'S REPORT.

October 21, 1908.

*Judge K. K. Leggett, President Board of Directors, Agricultural & Mechanical College, College Station, Texas.*

SIR: I have the honor to present herewith a brief statement in regard to the work of the A. & M. College during the past two years.

Up to the time of the strike in February, the College had had one and one-half years of the most prosperous work in its history. The attendance had increased during that time 51 per cent, while the increased expense of actual teaching was only 10 per cent. The Institution had become better and more favorably known to the people of Texas.

The Thirtieth Legislature gave the Institution the most liberal appropriation that it has ever acquired, including the money allowed accruing from the fees of the New Feed Law for a Feed Control Building, the total appropriation amounted to almost one-third of the total amount given the Institution during its previous thirty years existence.

The Repair Fund was increased from \$5000 to \$7500 annually. The Student Labor Fund from \$5000 to \$6000 annually. The appropriation for the Sub-Stations was increased \$500 each, annually. The Equipment Fund was increased some \$4000. In addition, we got special appropriations as follows: An Engineering Building, \$65,000; Veterinary Hospital, \$5000; Agricultural Implement Building, \$4000; Bath House, \$10,000; Dormitory, \$50,000; Livestock Sheds, \$1200; Cottages, \$2500. All these improvements have either been completed or are now being built, except the Engineering Building, the contract for which has been let.

In addition to these regular appropriations, we secured, by an amendment of the Stock Feed Law an appropriation that will approximate \$50,000 for a Feed Control Building. These improvements have added very materially to the growth and development of the College, as well as to the comfort and convenience of the students. I think that your Honorable Board may cherish a commendable pride in the

record that you have made in the last two years in the development of the Institution.

Respectfully submitted,

(Signed) H. H. HARRINGTON.

October 22, 1908.

*Col. R. T. Milner, President A. & M. College of Texas, College Station, Texas.*

DEAR SIR: I have the honor to present herewith a brief report on the work of the Agricultural Experiment Stations for presentation to the Thirty-First Legislature.

The work and usefulness of the Station has continued to advance steadily and the people of the State are appreciating more and more its service to them and its economic importance in the development of the State's agricultural resources. In fact, this appreciation has become so widespread and so well known that there is a very general demand for the establishment of a number of Sub-Stations over the State in the several localities where soil, climatic and labor conditions contribute to make each of these localities distinctively representative and different from the others. Texas is so large that she comprises within her area every type of soil, almost every condition of climate, and widely varying conditions of labor, market resources, transportation facilities, etc. So that not only should Sub-Stations be established in order to meet these widely varying conditions, but one or two Stations should be established to serve specific industries. I refer especially to the stock industry of the State. The cattle raisers, the swine breeders, the sheep and goat raisers, those engaged in the horse and mule industries, have a right to expect from the State some consideration in the proper scientific and practical development of their several interests. With this end in view, the State ought to establish a Feeding Station at Fort Worth, the most central point in the State for work of this kind. In addition, there ought to be a Feeding Station together with a grain growing station established at Amarillo. One of these places being below the quarantine line and the other above it, it is desirable that Stations should be conducted at both places. The black land area of the State ought to have a sub-station. The yield of oats and wheat and cotton in this area has steadily decreased until the commercial value of the farms has fallen away and the prosperity of the district been seriously impaired. The "Lower Plains Country," which, together with the "Upper Plains," when developed, will comprise an empire within itself—needs a station to demonstrate reliably and rapidly the great capabilities of that country from an agricultural standpoint. This lower plains country is best represented by the area from Stamford to Plainview and from Midland to Childress. The Trans-Pecos area deserves an Experiment Station in order that the development of that country may take place along right lines, and that peculiar difficulties existing there and nowhere else in the State, which the farmer of that country is forced to face, may be properly solved. The Rice and Sugar Belt of the State should have had an experiment station years ago. Their problems however must necessarily multiply as their industries increase in age, and they are entitled to aid from the State

in their efforts to build up the agricultural resources of the Coast Belt. East Texas now has one Station at Troupe, which has been of great service to the farmers of that locality. But there should be still another station established in Southeast Texas. The great central district of the State—I say central in point of inhabitants and development—and not geographically, reaching from Temple to Fort Worth and from Corsicana to Comanche, is entitled to an experiment station. Of course the great advantage to be derived from the station and its work is that the State, through them, can undertake experiments and problems in agriculture which individual farmers themselves are not able to carry out; problems, which, when solved, contribute materially to the wealth of the State. These stations, therefore, become an investment for the State which will, in time, pay for themselves many times over.

The Beeville Station has established upon a firm and definite basis the truck industry of that part of the State. It has demonstrated the adaptability of that country for olives. It has encouraged and is now fostering the growth of citrus fruits, although there remains much yet to be done in this direction. It has given valuable lessons to the farmers in irrigation, and, together with the main Station here, has helped them solve problems relating to plant diseases.

The Troupe Station is not so old as the Beeville Station, and still it has greatly aided East Texas farmers in certain lines of work, especially as to the use of fertilizers and in this respect alone has justified its existence and all the money that has been spent on it. It has been conducting valuable experiments in fruit growing and in viticulture. These experiments are not yet complete, but some very definite conclusions in regard to these industries will, in time, be reached. The Station has shown the great difficulty of growing alfalfa in East Texas on the ordinary loam soils because of the menace of crab grass, and yet the Station has not completed its work in this direction.

I append herewith a list of bulletins published by the Station during the last two years, and it will be noticed that they cover a most extensive field of problems relating to agriculture, horticulture and stock raising. Nearly all of the States have not only given something towards sub-stations, but they have supplemented the Federal appropriation, by which the central station in each State is supported. Texas is easily the greatest agricultural State in the Union. The money value of her products is now far beyond that of any other State, and yet her great resources have barely been touched. The farmers of this State, in all of the various branches of agriculture, contribute the largest proportion of taxes towards the support and maintenance of the State government. It is only fairness and not liberality that some part of this great contribution should be returned as a public expenditure for their benefit, in order that it may be multiplied many fold and given back to the State by a people made more prosperous and more contented by virtue of having received in some measure their own.

Respectfully submitted,

H. H. HARRINGTON.

A LIST AND TITLES OF TEXAS EXPERIMENT STATION BULLETINS PUBLISHED  
SINCE JUNE, 1906.

Bulletin No. 86.—Animal Husbandry Section, Sept., 1906.—*Cattle Feeding Experiments*. I. Molasses for fattening cattle. II. Rough rice as a steer feed. III. Profit from different systems of feeding cattle.

Bulletin No. 87.—*The San Jose Scale*. Entomological Department.

Bulletin No. 88.—*Length of life of Vines of various species and varieties of Grapes; Profitableness; And by what diseases seriously affected*. Horticultural Section, June, 1906.

Bulletin No. 89.—*Insects of the Garden*. With a chapter on the Melon Louse and other Aphids. Entomological Department.

Bulletin No. 90.—*The Feed Control in 1905-'06*. Chemical Section, Sept., 1906.

Bulletin No. 91.—*Food Adulteration in Texas*. Chemical Section, Oct., 1906.

Bulletin No. 92.—*A Test of the Producing Power of some Texas Seed Corn*. Agricultural Section, December, 1906.

Bulletin No. 93.—*The Sweet Potato Borer*. The Entomological Department.

Bulletin No. 94.—*Horticultural Survey of the Gulf Coast*. Horticultural Section, March, 1907.

Bulletin No. 95.—*Information Regarding the New Feed Law*. Feed control, May, 1907.

Bulletin No. 96.—*Commercial Fertilizers and Poisonous Insecticides in 1906-'07*. Chemical Section, July, 1907.

Bulletin No. 97.—*Kaffir Corn and Milo Maize for Fattening Cattle*. Animal Husbandry Section, June, 1907.

Bulletin No. 98.—*Summary Bulletin*. Texas Bulletins Nos. 1 to 94 inclusive.

Bulletin No. 99.—*The Composition and Properties of some Texas Soils*. Chemical Section, Dec. 1907.

Bulletin No. 100.—*The Chemical Composition of some Texas Soils*. Chemical Section, Dec., 1907.

Bulletin No. 101.—*Irish Potato Fertilizer Experiments*. Horticultural Section, Jan., 1908.

Bulletin No. 102.—*Texas Honey Plants*. Entomological Department, 1908.

Bulletin No. 103.—*Forage Crops in Northwest Texas—Co-operative Forage Crop Investigations Between the Texas Agricultural Experiment Station and the Bureau of Plant Industry, U. S. Department of Agriculture*. Agricultural Section.

Bulletin No. 104.—*Digestion Experiments*. Chemical Section, April, 1908.

Bulletin No. 105.—*Notes on Forest and Ornamental Trees, on the Grounds of the Agricultural and Mechanical College of Texas*, June, 1908. Horticultural Section.

Bulletin No. 106.—*The Product of Active Nitrogen in the Soil*. Chemical Section, July, 1908.

Bulletin No. 107.—*Commercial Fertilizers and Poisonous Insecticides in 1907-'08*. Chemical Section.

- Bulletin No. 108.—*Winter Bur Clover*. Agricultural Section, 1908.  
Bulletin No. 109.—*The Estimation of Cottonseed Hulls in Cottonseed Meal*. Technical Bulletin. Chemical Section, Aug., 1908.  
Bulletin No. 110.—*Cattle Feeding*, by Jno. C. Burns.  
Bulletin No. 111.—*Alfalfa*, by O. M. Ball.  
Bulletin No. 112.—*Texas Fever*, by M. Francis.  
Bulletin No. 113.—*Nature and Use of Fertilizer*, by G. S. Fraps.  
Bulletin No. 114.—*Spray Calendar*, by C. E. Sanborn.  
Bulletin No. 115.—*Fertilizer With Onions at Beeville*, by H. Ness and S. A. Woschka.

## ITEMIZED FINANCIAL STATEMENT.

## AGRICULTURAL AND MECHANICAL COLLEGE OF TEXAS.

### REPORT OF BOARD OF DIRECTORS.

*To His Excellency, Hon. T. M. Campbell, Governor of Texas.*

SIR: In presenting the biennial report of the Agricultural and Mechanical College of Texas, for the period ending with the fiscal year of August 31, 1910, we, the Board of Directors of the Institution, do not believe it would be out of place to mention that at the beginning of the session of 1910-11, a period not covered by this report, the student body of the College has reached more than a thousand students, and in making this statement, we direct your attention to the forecast made in our report two years ago, which was:

"There have been matriculated to date, the largest number of students in the history of the Institution, and it is confidently believed that with adequate dormitory facilities we would have a thousand students in the next two years."

With the close of the fiscal year ending August 31, 1910, the A. & M. College of Texas closed its thirty-fourth year of active existence. By an Act of Congress of 1862, the Federal Government made a grant of land to each State which would agree to establish at least "one college where the leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and mechanic arts, in such manner as the Legislature of the States may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions in life." In accepting the land grant, by an Act of the Legislature of 1866, the State received 180,000 acres of land scrip, being thirty thousand acres each for the two senators and four representatives in Congress, according to the apportionment under the census of 1860, that being the basis of endowment fixed by the Act of Congress making the land grant. The scrip was sold in 1871 at 87 cents on the dollar, and the proceeds invested in the seven per cent gold frontier defense bonds, issued under the Act of August 5, 1870. The amount realized from the sale of the scrip was \$156,600 and the bonds purchased amounted to \$174,000. That amount is the only endowment this institution has ever had, its other source of revenue being the biennial appropriation by the Legislature.

The College was opened for the reception of students October 4, 1876, and was a running institution during the year of our last constitutional convention, so that its existence is coincident with that of the Constitution which is now the organic law of this State. When the delegates who framed the Constitution of 1876 were deliberating, they decided, and wisely so, that there should

be established a University of the first class, and it was provided also that there should be a grant of one million acres of land as an endowment for that University. A paragraph was also inserted in the Constitution, being offered by a delegate to the convention who had in mind the benefit that would accrue to the Agricultural and Mechanical College of Texas, that this institution should be a "branch of the University of Texas." The A. & M. College was then a running institution. The University of Texas was not established for several years thereafter, in the fall of 1883. As the Constitution also provided that permanent improvements of the University should be provided out of the revenue from the land grant endowment of one million acres, there is a provision that no moneys shall be appropriated out of the general fund for buildings at the University. During the last two years that inhibition has been applied also to the Agricultural and Mechanical College, by reason of its constitutional designation as a "Branch of the University."

For nine years after the land grant to the University of Texas the A. & M. College received from the University funds as a "Branch of the University of Texas," \$40,000 or an average of \$4,444.44. After that the Board of directors of the A. & M. College voluntarily relinquished for the time any right to the University fund, depending upon the Legislature for support for the College. The action of the board in so relinquishing that right is set forth in the report to Hon. L. S. Ross, then Governor of Texas, by the late Hon. C. C. Garrett, then president of the Board of Directors, and until his death Chief Justice of the Court of Civil Appeals of the First Supreme Judicial District, of date December 15, 1888. In this report he said:

"In submitting their estimates for the information of the Legislature, the members of the board do not feel that it is a part of their functions merely to provide methods in which money may be expended, but that they should point out with fidelity to the trust imposed in them the means by which it can be, in their judgment, best administered. They feel that your excellency (Governor Ross) and each member of the Legislature, have the same interest in the success of the College that they have, the only difference being that theirs is of a more special nature. It has been usual for the Legislature to appropriate for the maintenance of this College, as a branch of the University, a portion of the University fund. It is the only part of the University, however, that can be maintained under the Constitution by appropriations from the general revenue, and while the right of the Agricultural and Mechanical College to have a fair proportion of the available University fund appropriated to its maintenance is unquestioned, still in view of the present straightened financial condition of the University proper, this College will not urge any specific appropriation, leaving it to the wisdom of your Excellency and the Legislature, to yield to the University and all its branches a support that will foster and build up the cause of higher education in this State, Literary and Classical, Professional and Industrial."

After that time the College has not received a "fair proportion

of the University fund," but has been allowed only the amount appropriated out of the general fund biennially by the Legislature.

The two institutions have always been conducted as separate and distinct. They have separate governing boards, and separate officials. That this is a wise provision of the State authorities has been shown by experience not only in this but in other States. In view of this condition; in view of the fact that the two institutions have reached the strength they have, there was a joint meeting of the Board of Regents of the University of Texas and the Board of Directors of the A. & M. College of Texas, during the past year, at which the proper method of separation of the two institutions, the proper method of State support for each of them, and the elimination of conditions that arise by reason of constant changes in the membership of the two boards, were discussed in detail, and it was the agreed verdict of the members of each of these governing bodies that the betterment of each institution would come from a complete separation by constitutional amendment; by provision for a fixed revenue for the College and by provision that members of the Board of Directors shall serve for a longer period than two years, periods of expiration of tenure of office being fixed so that some of the old members of the boards will remain in office at all times. In agreeing upon this the joint meeting of the two boards adopted the following resolutions which are for the consideration of the Governor and the members of the Thirty-second Legislature of Texas.

AUSTIN, TEXAS, November 24, 1909.

We, the Joint Committee of the Board of Directors of the A. & M. College and the Board of Regents of the University of Texas, hereby recommend to our respective boards for approval and support amendments to the Constitution of the State covering the following subjects:

1. The extension of the term of office of said board to eight years—a quarter of each board going out every two years.

2. A special tax at a rate to raise sufficient revenues for the maintenance and the building and equipment needs of the A. & M. College, in lieu of any interest of the College in the University permanent fund.

3. Authority to the Legislature to provide for the investment of the permanent fund of both institutions in such securities and other properties as it may designate.

The general purpose of these amendments is to remove the institutions from the troubled domain of politics and contentions, and to provide for their healthy development and extension.

Lengthening the term of office and at the same time providing for the going out of a portion of the membership of each board every two years, will have the effect of retaining experienced members and also of bringing new members to the boards fresh from the people at regular intervals.

The second amendment is necessary because there is doubt whether, under the present Constitution, the Legislature has power to pro-

vide for buildings and equipment at the A. & M. College. This does not apply to the University, as the Legislature has the constitutional power to pass a law levying a special tax for its maintenance, and if it does so the income from the University's permanent fund properly managed will probably be sufficient to provide for its building needs.

The third amendment is intended to enlarge the opportunities of the University and the A. & M. College in the management of their permanent funds, they being limited under the present Constitution to investments in State and United States bonds. These securities bear a very low rate of interest and are almost impossible to obtain.

In conclusion, we believe that upon a full consideration of the foregoing amendments, they will commend themselves to the favor and judgment of the people of the State.

In the matter of the action of the Joint Committee of the Regents of the University and A. & M. Board, report adopted as read: but it was unanimously recommended to the Board of Regents that they add in Clause 2, these words: "Thereby separating the two institutions." Our purpose in this is that the people of the State may readily understand and appreciate the full effect of the joint action of the two boards.

(Signed) K. K. LEGETT,  
President Board of Directors, A. & M. College.

Concurred in by the Board of Regents of University of Texas.

(Signed) T. S. HENDERSON,  
Chairman Board of Regents of the University of Texas.

To this joint action of the two boards we direct your serious consideration.

During a recent extraordinary session of the Thirty-first Legislature, some funds for permanent improvements at the College were provided by an amendment to the statute providing for the inspection of manufactured stock feeds, by which the excess of receipts over the expenses of the administration of the law, were appropriated to the use of the College. This law is administered by the College and the funds thus provided will be of some assistance in relieving the congested condition. The amount which had accumulated in the general treasury was sufficient to allow certain emergency expenditures to be cared for and we have used a part of it in contracting for two new dormitories, which are now under construction. However, the student body is now so large that every room in these two buildings will be taken the day they are thrown open for occupancy. While this statement of additional funds and the two dormitories does not rightly belong to this biennial report as we are supposed only to cover the period of time up to and including August 31, 1910, it is well that we advise you of the conditions existing, because the increase is so unusual, and it would seriously cripple the efficiency of the institution, if the condition at present were withheld until officially reported two years hence.

In this same connection we beg to say that there are now nearly

five hundred students occupying tents, more being in tents now than were in the institution March 1, 1908.

In the College there are now eight regular courses, extending through four years and leading to the degree of Bachelor of Science, the particular course pursued being specified in the diploma. These courses are as follows:

Agriculture.

Architecture.

Agricultural Engineering.

Chemical Engineering.

Civil Engineering.

Electrical Engineering.

Mechanical Engineering.

Textile Engineering.

In addition the following courses are offered:

A graduate course in Agriculture leading to the degree of Master of Science in Agriculture.

Graduate courses leading to the degree of Civil Engineer, Electrical Engineer, Mechanical Engineer, and Textile Engineer.

A two-year course in Agriculture.

A two-year course in Textile Engineering.

A two-year course in Agriculture for Teachers.

Students taking the course in Agriculture are given instruction in Agriculture, Horticulture, Animal Husbandry, Veterinary Science, Chemistry, and Biology, in addition to their regular academic studies.

Under the terms of the Federal land grant, instruction in Military Science is required. This instruction includes the four years of a student's stay at the College, the fourth year being as commissioned officers of the cadet corps, being instruction in the command of men, handling large numbers of subordinates, etc.

In addition to these instruction is given in English, History, Journalism, Languages, Mathematics, and Physics. To the instruction for the senior class has been added Public Speaking, which is under the direction of the Department of English.

During the past year the board has established a Division of Highway Engineering in the Department of Civil Engineering. The duties of the professor in charge of that division are as follows:

"1. He shall receive instructions from and work in harmony with, the professor in charge of the Civil Engineering Department in all matters pertaining to the department; and with reference to his outside work may have occasion for frequent conferences with the president of the College, to whom he shall be responsible through the head of the department, for the conduct of his outside work.

"2. In addition to his teaching work, it shall be his duty by correspondence, public lectures, published articles, conference with interested officials, etc., to arouse interest in the construction of improved highways in this State, and to assist in any movement towards this end. His absence from College, however, be so timed as to interfere as little as possible with the instruction work in the Department of Civil Engineering.

"3. He shall have, under the direction of the head of the depart-

ment, immediate charge of the instruction in Highways and Pavements, and in addition shall teach such other subjects in the Civil Engineering course as his available time may permit.

"4. Upon request of County Commissioners, officials of Good Road organizations, Town Councils, and other organizations directly interested in good roads, he shall give advice as to the best methods of location, construction, and maintenance of principal thoroughfares between the large towns, and furnish general approximate estimates of cost, but in no case shall he be required to make detailed surveys, estimates or designs."

In addition to the instruction work offered within the Department of Civil Engineering, this division will endeavor to conduct outside work with two main purposes in view:

1. To collect, tabulate, and distribute authentic information on road work as it is actually being done in Texas, and so far as possible, in other States as well.

2. To give special information and assistance to those directly engaged in road building. This may take the form of general advice as to the location, width, grade, materials, and equipment to be used in any case. But this department will at no time enter into the details of these matters as would be expected of an engineer directly in charge of such work.

The importance of the work of the professor in charge of the Division of Highway Engineering has been immediately recognized by the people of the State, and his assistance and advice has been asked for by county judges and county commissioners, and those who are engaged in the promotion of good roads through local and State organization. In association with the Texas Commercial Secretaries the department made an exhibit this fall at the State Fair of Texas at Dallas, and presented models and arguments of an educational nature. The Board of Directors of the College propose that this shall be a permanent work of the College; the professor of Highway Engineering is to teach Road Building and Road Improvement, as a part of the regular engineering education of the institution, and the head of the department and his subordinates are to be ready at all times to give advice and assistance to the county officers when that advice and assistance is sought. He will be prepared at all times to give estimates on cost of road building, on character of material to be used and what is best suited in various localities. In view of the widespread interest in this important branch of engineering, and in view of the fact that the A. & M. College has already established such a department, we would suggest that the professor of Highway Engineering at the A. & M. College of Texas be made State Highway Engineer, authorized to act with local communities on request, in permanent road improvements. The department already exists at the College and has laboratory equipment that is very valuable. The head of such a department, being selected by the Board of Directors, free from political influences, it would assure the selection always of an engineer proficient in his profession.

We have established during the past year a correspondence course in Agriculture, and it has been received with enthusiasm, the enroll-

ment including a large number of practical farmers throughout the State.

We have established a winter course in Agriculture for practical farmers which will be for six weeks commencing each year in January. We have established a course in Journalism, which is to be open to all students who desire to study it. Journalism is taught in the Agricultural College of Iowa, in the University of Wisconsin and at other institutions where agriculture is taught and it has been proved that it develops the young men along a line that is useful to them in after life.

We desire to call your special attention to the fact that the efficient military department maintained under the direction of Captain Andrew Moses, Commandant of Cadets, has resulted in recognition by the War Department of the United States Government. By an order issued during the past summer, the Agricultural and Mechanical College of Texas was designated as a "distinguished institution," and that designation entitles the president of the College to name one graduate of the last class as principal and one as alternate, for appointment to the United States army as a second lieutenant, taking the same grade as a graduate of West Point. There are but ten institutions selected annually by the War Department for this designation.

The corps of Cadets of the College is now in full regimental formation, with three battallions. The senior officer has the rank of Colonel, and the corps consists of three battallions of infantry, a battery of field artillery, a band and a bugle corps. It is the largest student body under complete military discipline in the United States.

During the past year private capital has constructed an interurban line between Bryan and the College and this is a convenience and facility for visitors to the College, as well as a convenience to those living at the College who do their trading in Bryan.

We believe that as this is a State institution, and one at which there is much being done in the way of research and investigation, that some method should be provided for dissemination of the valuable agricultural results that are at all times available and we have established a department of publicity, the functions of which are to furnish the daily and weekly newspapers of the State with matter showing conditions. Farm crop subjects are discussed, in fact every character of agricultural information is sent out by this department. The newspapers readily use much of this, it is prepared for them free of cost and it is being widely read.

We desire to direct your attention to the work being done by the Prairie View State Normal and Industrial College, the State institution for the education of the colored youth of the State, of both sexes, under the control of this Board of Directors. A great deal of progress has been made in industrial education at this institution during the past two years. The attendance has increased so that the accommodations of the institution are taxed to the limit, and temporary quarters have had to be provided pending some provision by the next Legislature to care for the large number enrolled. At the college boys and girls are taught the various trades and profes-

sions befitting their race and color, and they are taking a great interest in the work. Actual work in farming, blacksmithing, wagon making, broom making, cooking, millinery, dressmaking, shoemaking, and other trades is being done and the result of each year's instruction is a large number of students ready to take up profitable work. The funds provided for the Institution are inadequate to give proper instruction to all those who desire to enter, and as it is a laudable work that is having a great influence on the colored race in general, we believe that the Legislature will provide for enlarging the institution by appropriations necessary at this time.

We direct your attention to the biennial report of Col. R. T. Milner, president of the Agricultural and Mechanical College of Texas, which has been submitted to this board and which we have carefully examined. We endorse it in its entirety, and urge that the recommendations contained therein be given your most favorable consideration assuring you that need exists for every financial assistance asked for in that report. The A. & M. College of Texas is growing. The appropriations for the session of 1910-11 were made by the Thirty-first Legislature at a time when the College had an enrollment of about 600 students. The student body is now more than a thousand, it is growing every year; there were more students occupying tents at the beginning of the present session of the College than were in the institution in the spring of 1908. Every department is increasing in importance and new departments are being constantly added that will maintain the importance of the institution in comparison with similar institutions in other agricultural States of the West.

Texas can maintain the largest and most important of all the agricultural colleges of the United States with sufficient support guaranteed by the State, and we urge the Governor and the Legislature to carefully consider the recommendations made by the president of the College.

Respectfully submitted,

K. K. LEGETT,  
Chairman Board of Directors.

## REPORT OF THE PRESIDENT.

---

*Hon. K. K. Legett, President of the Board of Directors of the A. & M. College of Texas.*

DEAR SIR: I have the honor to submit the following biennial report for the years of 1908-09 and 1909-10. The total number of students enrolled for the session of 1908-09 was 644, and were distributed as follows:

### SENIORS.

Agriculture .....	10	
Architectural Engineering .....	3	
Chemical Engineering .....	0	
Civil Engineering .....	18	
Electrical Engineering .....	16	
Mechanical Engineering .....	1	
Textile Engineering .....	1	
Total .....	—	49

### JUNIORS.

Agriculture .....	17	
Architectural Engineering .....	4	
Chemical Engineering .....	0	
Civil Engineering .....	32	
Electrical Engineering .....	29	
Mechanical Engineering .....	6	
Textile Engineering .....	0	
Total .....	—	88

### SOPHOMORES.

Agriculture .....	30	
Architectural Engineering .....	11	
Chemical Engineering .....	1	
Civil Engineering .....	63	
Electrical Engineering .....	71	
Mechanical Engineering .....	29	
Textile Engineering .....	8	
Total .....	—	213

### FRESHMEN.

Agriculture .....	41	
Architectural Engineering .....	7	
Chemical Engineering .....	..	
Civil Engineering .....	61	
Electrical Engineering .....	80	
Mechanical Engineering .....	34	
Textile Engineering .....	3	
Total .....	—	226
Two-year Course in Agriculture (first year) .....	40	
Two-year Course in Agriculture (second year) .....	6	
Electives .....	17	
Specials .....	2	
Post Graduates .....	4	
Grand Total .....		645

It may be well here to call your attention to some of the various interests represented by the parents or guardians of the students who entered College at the opening of the session of 1908-09. We have the sons or wards of 76 farmers, 54 merchants, 21 lawyers, 14 doctors, 12 bankers, 11 real estate agents, 4 insurance agents, 10 railroad men, 1 bookkeeper, 5 traveling salesmen, 4 teachers, 1 mining engineer, 6 cotton brokers, 6 lumbermen, 27 stockmen, 8 contractors, 3 mechanics, 2 civil engineers, 1 painter, 1 author, 2 cashiers, 2 tanners, 2 blacksmiths, 1 florist, 2 hotel keepers, 1 soldier, 1 newspaper man, 4 rice planters, 1 clerk, 1 minister, 1 manufacturer, 1 college president, 1 dairyman, 1 nurseryman, 1 county superintendent.

The attendance for the session ending June 14, 1910, was the largest in the history of the College, the enrollment for the entire year making a total of 837. The gain over the previous year being 195 students, or 30 per cent; the gain over the session of 1906-07 being 61 per cent. They were distributed as follows:

## SENIORS.

Agriculture .....	13	
Architectural Engineering.....	4	
Chemical Engineering.....	0	
Civil Engineering.....	26	
Electrical Engineering.....	25	
Mechanical Engineering.....	4	
Textile Engineering.....	0	
Total .....	—	72

## JUNIORS.

Agriculture .....	27	
Architectural Engineering.....	10	
Chemical Engineering.....	2	
Civil Engineering.....	39	
Electrical Engineering.....	33	
Mechanical Engineering.....	22	
Textile Engineering.....	5	
Total .....	—	138

## SOPHOMORES.

Agriculture .....	53	
Architectural Engineering.....	24	
Chemical Engineering.....	2	
Electrical Engineering.....	61	
Civil Engineering.....	56	
Mechanical Engineering.....	21	
Textile Engineering.....	5	
Total .....	—	222

## FRESHMEN.

Agriculture .....	73	
Engineering .....	204	
Total .....	—	277
Sub-Freshmen .....		32
Two-year Course in Agriculture (first year).....		64
Two-year Course in Agriculture (second year).....		12
Two-year Course in Textile Eng. (first year).....		15
Specials .....		2

Number of students in the Regular Session.....	834
Number of students in the Summer School (1909), including 56 cadets .....	118
Total .....	952

The students who entered College during the session of 1909-10 are sons or wards of 106 farmers, 39 merchants, 18 lawyers, 15 clerks, 34 stockmen, 25 doctors, 17 real estate men, 4 butchers, 3 cotton buyers, 4 retired business men, 11 railroad men, 11 county officials, 15 contractors, 5 lumbermen, 3 ginners, 6 insurance agents, 2 transfer men, 7 traveling salesmen, 8 capitalists, 1 circuit judge, 1 State feed inspector, 3 rice planters, 2 miners, 1 manager of foundry, 2 mechanics, 8 bankers, 2 carpenters, 2 postmasters, 4 architects, 3 hotel keepers, 1 superintendent of schools, 1 electrician, 1 college president, 1 civil engineer, 3 ministers, 1 florist, 4 cashiers.

The Sub-freshman class was established at the beginning of the year just closed commencing with a registration of 31 students, but later a number of Freshmen were turned back to this class. There were no examinations for admission to the Sub-freshman class, and consequently it was composed largely of inferior material. This matter, however, has been remedied and applicants for the Sub-freshman class are required to pass an examination in algebra to simultaneous equations and history of the United States.

For engineering students the entrance requirements have been raised so as to include plane geometry and algebra through quadratic equations, and the entire curriculum has been raised and strengthened.

The losses by resignation and otherwise for the session of 1909-10 have amounted to 143, or 16 per cent, as against 23 per cent for the year previous and 38 per cent for the session 1907-08.

The attendance since the founding of the College, as shown by the following table, will be of interest:

Annual attendance since the opening is as follows:

1876-77.....	106
1877-78.....	331
1878-79.....	248
1879-80.....	144
1880-81.....	127
1881-82.....	258
1882-83.....	228
1883-84.....	108
1884-85.....	118
1885-86.....	170
1886-87.....	176
1887-88.....	214
1888-89.....	207
1889-90.....	279
1890-91.....	318
1891-92.....	331
1892-93.....	293
1893-94.....	313
1894-95.....	372
1895-96.....	354
1896-97.....	311
1897-98.....	337
1898-99.....	356
1899-00.....	396

1900-01.....	382
1901-02.....	407
1902-03.....	396
1903-04.....	378
1904-05.....	414
1905-06.....	416
1906-07.....	515
1907-08.....	625
1908-09.....	644
1909-10.....	838

A condensed report from the different departments should be carefully considered. It is as follows:

## SUMMARY OF THE REPORTS OF THE DIFFERENT DEPARTMENTS.

### AGRICULTURAL DEPARTMENT.

The people of this State have awakened at last to the importance of scientific agriculture and the relation it bears to the future development of the State. Large numbers of young men not only from the rural districts, but from the cities as well, are coming to the College to take up this work, and the instruction they receive has justified in every measure the great interest they have taken. The growth and development of the Agricultural Department has been very satisfactory, considering the limited amount of funds available for the execution of the work we have in hand.

Considering the great possibilities of agriculture in this State, and the important position of leadership which should be assumed and maintained by the Agricultural and Mechanical College in this development, it would appear to be poor economy to limit the effectiveness of our efforts by meager equipment of men and material or funds for proper maintenance.

The students of this Department not only study the theory of agriculture and take lectures on the subject, but receive a large amount of practical experience on the College farm. One of the State Agricultural Experiment Stations is located at the College, and has proved a great help to the students in their work.

For the benefit of the farming people, we have added a free correspondence course in agriculture, a six weeks winter course for practical farmers, and a four-year course in agricultural engineering. The agricultural department has also been of great assistance to the farmers' institutes of this State.

### ANIMAL HUSBANDRY DEPARTMENT.

The Animal Husbandry Department has grown steadily during the past two years in spite of the fact that it has been greatly handicapped from the lack of funds both for equipment and for maintenance. The raising of live stock being one of the greatest industries of Texas, the importance of the department to the people of the State can hardly be over estimated. Students are given thorough training

in judging, breeding and feeding live stock, as well as in the management of live stock farms and ranches. The great demand for training along this line is demonstrated in the fact that each year a larger number of students have specialized in Animal Husbandry than in all other courses of the agricultural division of the College combined. The teaching force of the Department now consists of three men. Further progress in its development will be practically an impossibility until funds are appropriated for the construction of a combined horse and cattle barn, a hog barn, a sheep barn, a judging pavilion, fences and means of supplying water, as well as for the purchase of more and better live stock.

#### POULTRY HUSBANDRY.

There is a great demand for the establishment of a course in poultry husbandry, which should include instruction in judging, selecting, care and management, incubating, breeding, feeding, showing, marketing and diseases of the various varieties of fowls. The raising of poultry is an important adjunct to every phase of farming in Texas. It is a rapidly growing industry and the source of a very large revenue. It deserves recognition and should be encouraged in every way possible by the State. In order to enable instruction in this line, funds must be appropriated for the purchase of the various types of fowls, the construction of fences and properly equipped houses.

#### ARCHITECTURAL ENGINEERING AND DRAWING.

The College offers regular four-year courses in Architecture and Architectural Engineering, besides this nearly every student in the College takes some work in this department. The work during the past two years has been satisfactory in every respect. Professor F. E. Giesecke, head of the department, is also College Architect. He designs all the new buildings and supervises their construction.

#### BIOLOGY DEPARTMENT.

In addition to the work in teaching, the instructors have been frequently called upon for services as consulting botanists and entomologists and have contributed articles on economic biology to the press of the State.

An unremitting warfare has been carried on by the department on the flies and mosquitoes that have been so great a pest during previous years.

Three years ago a course in Agricultural Bacteriology was offered to the senior students in Agriculture. This course has been unusually successful, especially during the present year. This success has, in a large part, been rendered possible by the proper equipment of the laboratory.

The students in this department have maintained a satisfactory high standard of work and it may be added that the quality as well as quantity of work done by them is greater and better than in any previous year.

## CIVIL ENGINEERING.

The class work of this department has been exceptionally good this year, and the attendance large. Graduates from this department must be giving satisfaction, if one may judge by the number of requests which come to us from time to time for competent civil engineers. We have men scattered over widely separated regions, as shown by the register of graduates in the catalogue. One is in German West Africa, several in South America, one or more in the Philippines, many in Mexico, more than a dozen in the employ of the United States Government on the Mississippi levee system, one is, I understand, chief engineer of the Oregon Railroad and Navigation Company, but most of them are here in Texas working in civil engineering and allied lines. The demand for men from this department is growing even faster than the numbers we are able to turn out each year.

With the increased room afforded by our new quarters, the Civil Engineering Building, this department will be able to do much better work than heretofore.

## ELECTRICAL ENGINEERING.

In addition to the regular amount of teaching, the head of the Department of Electrical Engineering has had charge of the rewiring of a number of College buildings. This rewiring has been done by students and has been the means of giving them quite a little valuable experience.

During the past year a branch of the American Institute of Electrical Engineers has been organized. This society, and the branch organization is an excellent means of keeping the students posted on electrical development.

The department has received donations of apparatus and sample materials from private parties amounting to about \$1500. While these donations have been very valuable from an educational point of view, the department is very poorly equipped along some lines. This is especially true of two of the most important branches of Electrical Engineering: namely, Electrical Railways, and Alternating Currents.

## ENGLISH.

The seven hundred and fifty students enrolled in this department have been required to do written work throughout the session, and the ever-present task of reading quiz books, compositions, and other exercises has required almost as much time as the class-room work.

The Faculty has requested the department to make provision for giving instruction in public speaking to the senior class one hour a week through the session.

## HORTICULTURE.

The demands for the graduates from this department are far more than we can supply. The men who graduated from this department

have secured positions that will pay from \$1000 to \$1200 per year. The public schools over the State are beginning to realize the importance of men equipped to teach Horticulture and are offering fancy salaries for their services.

#### TEXTILE ENGINEERING.

More than a year ago a two-year course in Textile Engineering in addition to the regular four-year course, was installed. This course has proven to be attractive and we predict a great future for it. Its aim is to fit young men to go into the cotton mills of the South and take positions as managers and foremen.

Arrangements are being made to have the school again represented in the exhibit hall of the Galveston Cotton Carnival. This time they offer to pay all expenses.

The last Legislature made a special appropriation of \$1000 for the establishment of a school for giving instruction in cotton classing at this College. This amount was made to cover the two year period. This work has been turned over to the Department of Textile Engineering and we are now scheduled to give instruction in connection with the Summer School and to the Agricultural and Textile students of the College during the regular session.

#### VETERINARY SCIENCE.

The past two years have been the most successful ones in the history of the College. During the year we have treated 146 cases in the Veterinary Hospital. Any one familiar with the work of this department can see that the time is not far distant when a new Veterinary Building will have to be provided and the establishment of a regular Veterinary Science Course by the College authorities. But nothing of this nature should be attempted until the building, equipment, and teaching force are adequate to meet the situation.

#### HOG CHOLERA.

During the past year the Veterinary Department has taken up the work of the Hog Cholera vaccine with the funds appropriated by the last Legislature. We have used the vaccine in several outbreaks of Hog Cholera with highly satisfactory results. We have been fortunate in that there has not been a great deal of Cholera in Texas this year, and that our small appropriation and limited means of production have met the demand. I am sure that this department can not serve the State in any better way than to produce the serum.

#### LIBRARY.

The patronage of the Library during the present session of the College has largely increased over last. The students are taking more interest in the books available to them and seemingly appreciate the facilities afforded.

We need better facilities for the Library of the College. This

department is now located on the third floor of the Main Building in very crowded quarters. There are many valuable books in this department, and there is no protection for them against fire. The Library being a depository of the United States Government, it contains thousands of valuable books and documents that should be taken care of, but it can not be done in the quarters now provided. There should be appropriations for a Library Building, and for books, the only money allowed for the Library in a half dozen years being \$1200 for the two years ending August 31, 1911.

#### HEALTH DEPARTMENT.

The mosquito question has never been lost sight of and there has been a fight against them all the time. The barracks are in good sanitary condition and there has been very little malaria among the students at any time during the last two years, and scarcely any sickness, which is mainly due to good sanitation. There has been only three cases of contagious diseases during the session. Two cases of pneumonia and a good deal of minor surgery. A modern hospital is badly needed, and more in keeping with the growth of the institution. The present one is badly dilapidated, and can only accommodate two and one-half per cent at one time of the student body now in attendance.

#### STEAM PLANT.

The steam plant includes the ice factory, water works, laundry, and the power plant. It also furnishes steam heat to the natatorium and to some of the dormitories. The service has been fair, at least equal to that of the smaller towns of the State. The laundry is very much crowded and badly in need of new machines.

#### ENTOMOLOGICAL DEPARTMENT.

This department has charge of the College Apiary and the foul brood eradication work, and has been of inestimable value to the beekeepers of the State. We have only one man in this department and for this reason we have not been able to do the work that should be done. There are in Uvalde County alone not less than 15,000 colonies of bees valued at upwards of \$60,000. Without the State's protection this investment would be practically wiped out in a few years by foul brood. This department should be so equipped, that they may be able to render assistance in the fight against the green bug, the boll weevil and other injurious insects in the State.

#### MILITARY DEPARTMENT.

Due to the high and distinguished rating, B. A., given the College by the War Department last year, it was possible to obtain two breech loading rifled cannon, with carriages and equipment. The members of the senior class for whom there were no vacancies as Cadet Officers were assigned to this Battery and have rendered good

service. It is of great importance that the Battery be kept in an efficient condition, as it enables the Commandant to assign the Senior Privates to duty that is interesting and instructive to them, and it has a bearing on the efficiency and contentment of the whole student body.

#### ARTILLERY HORSES.

The War Department will furnish harness, saddles and other equipment necessary to mount this Battery as soon as the College provides horses. It is difficult to keep up the efficiency of the Battery without having horses for mounted drills. As I believe the requiring of all Cadets to drill is conducive to the discipline of the whole Corps, it is highly important that a few horses be provided for the Field Battery. I earnestly recommend therefore that ten horses be provided for this purpose. Each cannon should have four horses and there should be at least two horses provided for Cadets in charge as officers. Two (2) pairs of horses of the type of French or German Coach horses would make excellent wheel teams, while the two (2) lead teams and the two (2) saddle horses might be any good smooth type of graded horses with good action. I have consulted the Professor of Animal Husbandry as to whether he had such horses in his department and learn that he has not, but that it would be of great benefit in teaching the classes in Animal Husbandry to have them. I respectfully suggest that if these horses can be procured for the Animal Husbandry Department for use in class work, the Military Department will gladly undertake to exercise and use them at Artillery drills. It would thus seem that the providing of these horses would be of great benefit to the Animal Husbandry Department in instructing students, as well as to the Military Department. I understand that ten good horses suitable for proper class demonstration work, could be bought for about \$4000. I trust it may be possible to provide for the purchase of these horses.

#### PUBLICITY DEPARTMENT.

There is a great deal of work being done in the nature of research and experiment. The results of this character of work will be of little good to the general public however, if the facts remain with the scientific men who perform these duties, and in the fall of 1908, we established a department that has to do with publicity. Through this department the newspapers of the State are furnished with information from every branch of the Agricultural Department; the results of experiment and research on the farm, by the State chemist, by the State entomologist and other officers of the institution. Questions are answered through the press, information regarding crops is published at the time that information is the most valuable; advice as to fertilizers and pests is prepared and furnished to the press, so that it will reach the largest number of persons. This matter is furnished free to the press, no newspaper of this State being allowed to pay for any matter going out from the Publicity Department. It is virtually a free correspondence course, because it covers every

class of information, disseminated at the time it is most valuable, and through this department we are enabled to reach hundreds of thousands of people every week.

#### AGRICULTURAL EXTENSION DEPARTMENT.

For the benefit of the farmers in the State who are unable to attend College, we have inaugurated an Agricultural Extension Department, and have now about seven hundred students enrolled for this work.

In charge of this work is C. M. Evans. He is a former graduate of this school. In 1907-08 he was student assistant in Animal Husbandry in the Iowa State College and was granted by that school the degree of Master of Scientific Agriculture. Later he was assistant in Agricultural Extension to P. C. Holden, until appointed Director of Agriculture at Lennox, from which position he came here. It is desired to take the work up under the following heads:

(1) Conducting local short courses—reaching the real farmer—the man who is not able to get away from home very often.

(2) Co-operating with the county fairs. Furnishing judges for the exhibits; a conductor for boys' and girls' judging contests in stock and grain and cooking and a general lecturer for the public.

(3) Co-operating with public schools in regard to agricultural and industrial education.

(4) Conducting of special trains under the College management in co-operation with the railroads.

(5) Preparing educational exhibits for the State fair and if possible run a demonstration school on the grounds during the fair.

(6) Demonstration Farms.

(7) Conducting of Various Contests.—The time is now ripe for a State dairy cow contest. Interest among the farmers should be aroused in this great industry. The State fair has offered premiums for the best producing herd of dairy cattle but no contestants have shown up simply because no organized assistance has been given.

(8) Correspondence Courses.—These should get the farmers in touch with the College and Experiment Station. They will encourage intelligent reading of agricultural literature and a correct interpretation of experiment station work and results.

#### MECHANICAL ENGINEERING.

The Mechanical Engineering Department is housed in a building wholly inadequate and very poorly adapted to the needs. When it is remembered that no student completes any course in the College without taking some work in this Department, it is easily understood that the exceedingly overcrowded and inadequate quarters cause each student to suffer some loss, and make the work of instruction exceedingly difficult. In addition to the general growth of the College it is a remarkable fact that the number of students taking the mechanical course has increased in the past four years from a senior class of two students to the present senior class of eighteen. This makes it im-

possible to do the proper work in the upper classes with the present equipment and in the present quarters.

In addition to the financial needs of the Department there should be erected a new and special building to cost not less than \$75,000 and for the equipment of which not less than \$25,000 should be provided. If no new quarters are supplied this equipment could not be housed, and only about one-fifth of the amount could be cared for.

#### CONDITIONS AS THEY NOW EXIST.

The A. & M. College of Texas presents a condition today strikingly unlike that of any other educational institution in the world. Covering an area of about ten acres are stretched 243 tents, in which are lodged 486 cadets. There are more students in tents than were enrolled in the College in 1906. The student body is the largest under military discipline in the world. There are 600 more cadets in this school than are in West Point. If the two dormitories now under construction were completed the students in tents would fill them and leave 82 unprovided for. The enrollment up to date is 1023 and it will no doubt reach 1100 by the middle of January. The Mess Hall can not accommodate any increase over the present number. The cadets now practically occupy all the space in the Chapel. The section rooms are crowded to their utmost capacity. The Mechanical Engineering Building is wholly inadequate to accommodate students that must have instruction in that Department, and so pressing is the need for additional room there that we are constructing a temporary forge room of corrugated iron, which will answer our purpose until the Legislature can give us relief. We have been compelled to secure additional instructors in every department, and the appropriation of \$50,000 for maintenance is more than \$10,000 too small to meet the emergency this year. For the years of 1907-08 and 1908-09, when the number of students was only about half of the present number, the amount for maintenance was \$45,000. It is now only \$50,000. That we will be forced to meet a deficiency or close the school is too apparent for argument.

The unprecedented educational revolution in Texas, the yearning desire of our young men to prepare themselves for industrial pursuits, calls for immediate help. Need I stop now in this enlightened age to discuss the importance of technical training? It seems that common sense would answer "No." In every progressive nation today each step is marked by some new discovery of science, art, commerce, or domestic economy. The field of knowledge is as broad as the universe itself. The developments in the applied sciences, including agriculture, horticulture, mechanical engineering, electrical engineering, and architectural engineering, have wrought greater changes for the happiness of mankind than were ever produced by the combined wisdom of all the kings and monarchs of the world. Technical education is bringing to mankind a new democracy—the democracy in which the great mass of the people enjoy the fruits of their own labor, and in which the labors and inventions of all men are more equally distributed. The power that gives light by night

to the rich man gives it to a larger per cent of the poor than ever before. The electric car reduces the time between the country people and the city to a few minutes at a cost so small that the person of the most moderate means does not mind it. The unrestricted means of transportation have created markets for the field and the garden in every nook and corner of the world, thus increasing the demand for the farmer's products and stimulating him to call to his aid the highest skill known to science, that he may increase the yield of his land without increasing the cost of production. The telephone has placed him in communication with his neighbors and severed the many hindrances that formerly stood between him and the market.

In the Franco-Prussian war in 1870 and 1871, the German soldiery demonstrated in a fashion such as to make a lasting impression upon the whole civilized world the importance of technical training. J. W. Turner, Superintendent of Technical Education in New South Wales, writing of this particular incident of the war, most graphically describes the condition as follows:

"It has often been said that the issue of the war of 1870-71 was largely owing to the fact that every German soldier was a mechanician. The cavalryman was a farrier who could shoe his horse and a veterinary surgeon who could doctor it. The linesman knew the parts of his rifle, could take it apart, repair it if required, and put it together again. The artillerist was a practical engineer, to whom the mechanism of his cannon was an open book. Even the drivers of the baggage and ammunition wagons were blacksmiths and wheelwrights. The German army was a 'Technical School,' making a marching tour through France for educational purposes. An armed force of such perfectly human machines was invincible."

And he might have added that at the time these German soldiers were passing through France as an army of trained machinists, they were being fed by the most skilled farmers in the world who remained on the farms at home. Texas has an opportunity to build at this place and at this time the most powerful school of technology in the world. A few paltry appropriations given in dribs will not do it. I am opposed to extravagance, and would not want to see money lavished on gorgeous buildings and unnecessary equipment. But wisdom and economy suggest that our buildings should be adequate, fire proof and durable. They should be equipped with all the laboratories and apparatus necessary to give the most thorough practical and theoretical instruction in the several departments taught in the College. If Texas will furnish the equipment, Texas will also furnish the boys. Under the light of scientific training in agriculture and the different engineering courses, at this College, the value of the service of the young men who will receive this training, under adequate facilities, will be absolutely incalculable.

Shall this school continue to advance, or stop right where it is? The question of getting young men to take the work here is no longer debatable. The fact that the student body has almost doubled during the last two years settles that question. The proposition is now squarely up to the people of Texas and their representatives in the Legislature.

I am not asking any personal favors for men whatever, directly nor indirectly, as present conditions will justify the continuance of every employee of the College who will continue to perform his duty. I plead for the boys of Texas.

Below is given a summary of the actual needs of the College to maintain the present number of students.

Certainly the Legislature will provide for the continual growth of the institution, and in that event large sums must be set aside for additional buildings. These buildings should be provided for by the Legislature, which is to meet in January, under the emergency clause, so that they may be completed by the opening of the session in the fall of 1911, at which time the probabilities are we will have over 1200 students. At the proper time the College Architect will furnish an estimate of the cost of these buildings.

R. T. MILNER, President.

APPROPRIATIONS NEEDED BY THE AGRICULTURAL AND MECHANICAL COLLEGE OF TEXAS FOR THE YEARS  
OF 1911-12 AND 1912-13.

	1911-12	1912-13
<i>Agricultural Department—</i>		
Equipment .....	\$ 3,000 00	\$ 2,000 00
Maintenance and Support.....	5,000 00	5,000 00
Repair to Agricultural Building.....	500 00	
<i>Animal Husbandry Department—</i>		
Combined cattle and horse barn.....	\$ 6,000 00	
Sheep barn .....	1,500 00	
Hog barn.....	1,500 00	
Fences and means of supplying stock with water.	3,000 00	
Live stock.....	15,000 00	
Animal Husbandry Building, including Judging pavillion .....	30,000 00	
Running expenses .....	1,500 00	1,500 00
<i>Architectural Engineering Department.....</i>	\$ 500 00	\$ 500 00
<i>Biology Department—</i>		
Equipment .....	\$ 1,000 00	\$ 1,000 00
Maintenance .....	750 00	750 00
<i>Chemistry Department .....</i>	\$ 2,000 00	\$ 2,000 00
<i>Civil Engineering Department—</i>		
Equipment .....	\$ 4,000 00	\$ 4,000 00
Binding Periodicals, office supplies.....	500 00	500 00
<i>Division of Highway Engineering—</i>		
Salaries, testing machinery, traveling expenses publishing bulletins and general expenses.....	\$ 10,000 00	\$ 10,000 00
<i>Electrical Engineering Department—</i>		
Equipment .....	\$ 4,000 00	\$ 4,000 00
Maintenance and support.....	1,000 00	1,000 00
<i>Entomological Department—</i>		
Foul brood eradication work.....	\$ 3,000 00	\$ 5,000 00
Apiary and agricultural experiments.....	1,200 00	2,000 00
New laboratory, equipment, supplies, for class and laboratory work.....	600 00	600 00
Maintenance and running expenses.....	1,200 00	1,000 00
Postage, stationery, printing.....	460 00	550 00
Assistant Entomologist, salary.....	1,500 00	1,500 00
Stenographer, salary .....	900 00	900 00
Traveling expenses, Entomologist.....	450 00	450 00
Traveling expenses, Assistant Entomologist.....	800 00	800 00
Salary, Assistant Professor of Entomology.....	1,400 00	1,500 00
Repairs .....		250 00
<i>Horticultural Department—</i>		
Cannery .....	\$ 750 00	
Equipment (spraying machine, etc.).....	500 00	500 00
Maintenance and support.....	1,000 00	1,000 00
<i>Library .....</i>	\$ 1,000 00	\$ 1,000 00

*Mechanical Engineering Department—*

	1911-12	1912-13
Maintenance and support.....	\$ 2,055 00	\$ 2,410 00
Equipment .....	5,000 00	7,500 00

*Military Department—*

Horses for Field Artillery.....	\$ 4,000 00

Repairs and painting.....	3,000 00	3,000 00
Student labor.....	2,000 00	2,000 00
Fences and bridges.....	500 00	500 00
Steam plant and running expenses.....	500 00	500 00

## ITEMIZED FINANCIAL STATEMENT.

## LIST OF PROFESSORS, ASSISTANTS AND EMPLOYES, AND THE ANNUAL SALARY PAID EACH.

R. T. Milner, President.....	\$ 4,000 00
A. B. Wilcox, Secretary.....	1,200 00
James Sullivan, Stenographer and Secretary to the Board.....	900 00
J. M. Carson, Jr., Treasurer.....	1,800 00
C. A. Felker, Clerk.....	1,000 00
J. C. Nagle, Prof. Civil Engineering.....	2,350 00
D. W. Spence, Prof. Structural Engineering.....	2,700 00
R. J. Potts, Asst. Prof. Civil Engineering.....	1,400 00
F. C. Bolton, Prof. Electrical Engineering.....	1,800 00
J. E. Lear, Asst. Prof. Electrical Engineering.....	1,300 00
Jno. W. Kidd, Professor of Physics.....	1,500 00
O. B. Wooten, Instructor in Physics.....	1,000 00
D. C. Johnson, Instructor in Physics.....	1,200 00
E. J. Fermier, Prof. Mechanical Engineering.....	2,250 00
J. A. Herrington, Instructor in Wood Work.....	1,000 00
S. E. Herrington, Supt. of Shops.....	1,200 00
L. L. Chapelle, Instructor in Forge Work.....	900 00
C. K. Standish, Machinist.....	800 00
W. E. Clark, Instructor in Wood Work.....	800 00
J. B. Bagley, Prof. Textile Engineering.....	2,000 00
C. S. Tatum, Asst. Prof. Textile Engineering.....	1,200 00
F. E. Giesecke, Prof. Architectural Engineering and Drawing....	2,700 00
A. Mitchell, Asst. Prof. Architectural Engineering and Drawing..	1,300 00
J. S. Dean, Asst. Prof. Architectural Engineering and Drawing....	1,400 00
G. A. Geist, Instructor in Free Hand Drawing.....	1,300 00
C. L. Wignall, Instructor in Free Hand Drawing.....	900 00
J. C. Blake, Prof. Chemistry.....	2,250 00
F. H. MacDougall, Asst. Prof. Chemistry.....	1,300 00
W. P. Nelson, Assistant in Chemistry.....	800 00
E. J. Kyle, Professor of Horticulture.....	2,000 00
H. Ness, Asst. Prof. Horticulture.....	1,400 00
E. A. Miller, Instructor in Horticulture.....	800 00
C. H. Alvord, Prof. Farm Husbandry.....	2,500 00
H. L. McKnight, Asst. Prof. Farm Husbandry.....	1,500 00
J. L. Thomas, Asst. Prof. Farm Husbandry.....	1,100 00
W. A. Leigh, Stenographer.....	720 00
Jno. C. Burns, Prof. Animal Husbandry.....	1,750 00
Herdsmen .....	420 00
D. T. Griswold, Asst. Prof. Animal Husbandry.....	1,000 00
M. Francis, Prof. Veterinary Science.....	2,250 00
R. P. Marsteller, Assoc. Prof. Veterinary Science.....	2,000 00
O. F. Chastian, Prof. History and Economics.....	1,800 00
R. H. Leavell, Asst. Prof. Economics.....	1,200 00
C. P. Fountain, Prof. English.....	2,000 00
J. A. Lomax, Assoc. Prof. English.....	1,800 00
W. H. Thomas, Instructor in English.....	1,200 00
G. C. Embry, Instructor in English.....	1,200 00
R. W. Follett, Instructor in English.....	1,045 00
C. D. Britten, Instructor in English.....	900 00
Charles Puryear, Dean and Prof. Mathematics.....	2,700 00
R. F. Smith, Assoc. Prof. Mathematics.....	1,600 00
J. W. Mitchell, Instructor in Mathematics.....	1,200 00
J. N. Michle, Instructor in Mathematics.....	1,200 00
J. D. Garner, Instructor in Mathematics.....	1,200 00
D. C. Jones, Instructor in Mathematics.....	900 00
I. C. Nichols, Instructor in Mathematics.....	1,000 00

Wilmon Newell, State Entomologist.....	2,250 00
O. M. Ball, Prof. Botany and Zoology.....	2,000 00
E. Scholl, Asst. Prof. Botany and Zoology.....	1,200 00
C. B. Campbell, Prof. Languages.....	1,500 00
Isaac Alexander, Chaplain.....	1,500 00
Andrew Moses, Commandant and Instructor Military Science.....	600 00
J. M. Kenney, Clerk to the Commandant.....	720 00
August Thomsen, Caretaker of Grounds.....	900 00
Two laborers.....	720 00
H. H. Harrington, Director of Experiment Stations.....	3,500 00
*W. C. Welborn, Vice-Director of Experiment Stations.....	2,500 00
G. S. Fraps, State Chemist.....	2,250 00
N. C. Hamner, Asst. Chemist.....	1,200 00
A. S. Ware, Stenographer.....	840 00
S. E. Asbury, Asst. Chemist.....	1,200 00
E. C. Carlyle, Asst. Chemist.....	1,000 00
J. B. Rather, Asst. Chemist.....	900 00
T. L. Ogier, Asst. Chemist.....	850 00
R. B. Lowery, Asst. Chemist.....	750 00
Assistant Chemist.....	750 00
G. C. Sanders, Clerk.....	800 00
J. W. Carson, State Feed Inspector.....	2,200 00
C. W. Crisler, Chief Clerk Feed Control.....	1,400 00
L. McLennan, Deputy Feed Inspector.....	1,000 00
J. H. Rogers, Deputy Feed Inspector.....	1,000 00
J. W. Murphy, Deputy Feed Inspector.....	1,000 00
Gus Valkas, Deputy Feed Inspector.....	1,000 00
F. R. Navaille, Stenographer.....	960 00
Miss Dora Umensetter, Stenographer.....	600 00
Foreman of Farm.....	600 00
Geo. Grupe, Supt. Steam Plant.....	1,200 00
B. Sbisá, Steward.....	1,800 00
Janitor Department Pay Roll.....	3,500 00
B. P. Day, Bugler.....	810 00
W. W. Smith, Plumber.....	1,080 00
N. A. Merriam, Physical Director.....	900 00
Dr. J. R. Lay, Surgeon.....	2,300 00
Miss S. P. Young, Nurse.....	600 00
Students' Exchange, R. K. Chatham, Mgr.....	1,200 00
J. H. Quarles, Librarian.....	1,600 00
M. Ashline, Natatorium.....	540 00

\*Resigned May 1, 1910.

BIENNIAL REPORT  
OF THE  
Texas  
Agricultural Experiment  
Station

NOVEMBER 11, 1910

Dr. H. H. HARRINGTON, Director  
COLLEGE STATION, TEXAS

# BIENNIAL REPORT OF AGRICULTURAL EXPERIMENT STATIONS

---

COLLEGE STATION, TEXAS, November 11, 1910.

*Colonel R. T. Milner, President Agricultural and Mechanical College,  
College Station, Texas.*

DEAR SIR: I have the honor to submit herewith my biennial report for the Experiment Station located in connection with this institution.

Personnel of the Station Staff consists at present of the following:

H. H. Harrington.....	Director
J. W. Carson.....	Assistant to the Director and State Feed Inspector
M. Francis.....	Veterinarian
G. S. Fraps.....	Chemist
J. C. Burns.....	Animal Husbandry
H. Ness.....	Horticulturist
H. L. McKnight.....	Agriculturist
Wilmon Newell.....	Entomologist
Raymond H. Pond.....	Plant Pathologist
N. C. Hamner.....	Assistant Chemist
E. C. Carlyle.....	Assistant Chemist
J. B. Rather.....	Assistant Chemist
C. W. Crisler.....	Chief Clerk
Carrie Fuqua.....	Stenographer
A. S. Ware.....	Stenographer

From this it will be noticed that we maintain departments of Veterinary Medicine, Chemistry, Animal Husbandry, Entomology, Plant Pathology, and Horticulture, with the necessary assistants and clerks to properly carry out the work of these several departments. The Main Station is supported by a fund known as the Hatch Fund, appropriating \$15,000 a year to be expended in almost any line of science as related to agriculture. In addition to this fund, we have also what is known as the Adams Fund, which for this year amounts to \$15,000, and will be a regular permanent fund, supplementary to the Hatch Fund. The Adams money, however, can be used only for original investigation, and not for field experiments, miscellaneous chemical analyses, varietal tests of plants or crops, or for any other line of work that does not involve original investigation. Both of these sums are appropriated from the United States Treasury and placed under the Board of Directors of the Agricultural and Mechanical College for proper direction and expenditure. It is, perhaps, not saying too much to state that no other law ever passed by Congress in the interest of the agricultural development of this country has in any way approached the Hatch Act in usefulness and effectiveness towards increasing the productive wealth of the farm, and in elevating the financial and social standing of the farmer. The staff of these Stations have not only carried out conscientiously their duties involved in the law creating the Stations and imposed upon

them by the Board of Directors, but they have also given freely of their time and energy to extra labor, without compensation, in order that they might contribute to the development and upbuilding of the agriculture of the State and of the country.

The stations in the several States have perhaps served more than any other one agency to dignify agriculture as a calling and to enlist confidence and support from the public. Farmers are the most conservative class of our citizenship, and there are many reasons why they should be so. They are slow to accept new doctrines and changing conditions, even when the necessity for such acceptance has been clearly demonstrated and after it has been shown that the adoption of proposed methods might reasonably be expected to result in their favor. But the Stations, through the aid of their publications, through a wide correspondence, and through personal contact with the farmers by the Station officers themselves, have largely replaced this feeling of doubt and suspicion on the part of the farmers towards plans of work that emanate from trained men of science. The most progressive farmers of our State now realize that there is nothing antagonistic between the teachings of the Agricultural College and the Experiment Station and the truths which the farmers have themselves learned by experience in the field. The fact is that scientific agriculture and practical agriculture must necessarily harmonize.

But it has not been the farming class alone that the Stations have benefited. By the work of their scientific men they have brought agriculture more nearly to the plane of a science, and given it prestige and standing in financial and business circles, which has quickened the thought and enlisted the sympathy and support of men in all professions and vocations of life; broadening and deepening our faith in the farm as a home and in country life as a means for development of our best citizenship.

The Texas Station has, through its several departments, contributed broadly and widely to the development of agriculture in this State. It is not necessary here to go into details as to the many ways in which the Station has benefited Texas agriculture, but I may mention by title some of the bulletins which have been issued since my last biennial report:

"The Effect of Salt Water on Rice."

"Commercial Fertilizers and Poisonous Insecticides."

"Pecan Case Borer."

"Some Soils of Angelina, Brazoria, Cameron, Cherokee, Delta, Lamar, Hidalgo, Lavaca, Montgomery, Nacogdoches, Robertson, Rusk, Webb and Wilson Counties."

"Active Phosphoric Acid and Its Relation to the Needs of the Soil for Phosphoric Acid, as Shown in Pot Experiments."

"Cottonseed Meal as Human Food."

"Studies of the Ammonia-Soluble Organic Matter of the Soil."

In addition to these, we have other bulletins now in press. We have also issued Press Bulletins upon the following subjects:

"Fall Planting of Irish Potatoes."

"Control of Weevils in Corn and Grain."

"Treatment for the San Jose Scale."

These press bulletins are sent out to the papers of the State and are either copied entirely by these papers, or important extracts made from them.

The Station has also jurisdiction over the Feed Control Law, and keeps a corps of inspectors constantly on the road to inspect feeds and gather samples as prepared by the mills and offered for sale by the merchants, in order that there may be no adulteration of stock feeds and consequently no swindling in the sale of these products. The financial report of the College Treasurer will show the receipt and distribution of the revenue arising from the operation of this law.

#### STATE STATIONS.

In 1895 there was a State Station established at Beeville, in Bee County, and placed under the jurisdiction of the Director of the Central Station at this place, and in 1902 another State Station was established at Troupe, in Smith County. These stations have from time to time issued bulletins which have been widely sought after, not only by the farmers in this State, but by homeseekers and prospective immigrants from other States. Because of the size and varied conditions of soil and climate, a popular feeling arose that Texas ought to have additional State stations, and accordingly the Thirty-first Legislature appropriated \$25,000 annually for two years, in order that such stations might be established, and placed all these State stations under the direction of a new Board, consisting of the Governor, the Lieutenant-Governor, and the Commissioner of Agriculture. Accordingly, stations have been established at Lubbock, in the Panhandle; at Spur, on the Lower Plains; at Denton, in Denton County; a Feeding Station at Fort Worth, an Irrigation Station at Pecos, a Central Black Land Station at Temple, a Rice and Citrus Fruit Station at Angleton and one at Beaumont. In addition to these stations, we have been doing co-operative work with the United States Department of Agriculture in forage crops at Chillicothe, and with tobacco at Nacogdoches. The work of these stations will be embodied in a separate report to the new Board.

A financial statement of the Main or Central station, located here, is incorporated in the financial statement of the Treasurer of the College, he being Treasurer of the Station also.

By a generous provision of the Thirtieth Legislature, a commodious two-story brick building has been constructed, at a cost of about \$35,000, to be used as a Station Administration Building. Nearly all the departments connected with the Station are now installed in this building, with comfortable and commodious quarters.

Respectfully submitted,

H. H. HARRINGTON, Director.
